

## Bomb Threat Recording System AS 500 DR

Directly connected to the telephone line, the AS 500 DR Bomb Threat Recording System allows permanent documentation of threatening calls. All inbound and outbound calls including the time and date information are directly stored on the digital ring memory of the DS 4.

Once a call is recognized by the operator as conveying a threatening message, it is locked and copied onto cassette. Thus the recording can be replayed on any commercial cassette recorder. Even during replay operations the DS 4 continues to record incoming calls so that no calls are being lost. Less important calls will be overwritten automatically to provide personal data protection.

### At only the push of a button

For permanent documentation of a threatening call onto the recorder AN 2 simply the push of a single button is required. The button can be pressed at any time during the call prompting transfer of a copy of the complete call onto an ordinary compact cassette in the AN 2. The Time-Code System AN 2 TI integrated into the AN 2 marks the copy being transferred with the time and date stamping of the call, thus securing the precise time designation of every recorded call.

### Expandable system

The Bomb Threat Recording System AS 500 DR consists of one DS 4 digital recorder for each operator (max. 15 positions) plus a single analogue AN 2 cassette recorder with the integrated Time-Code System AN 2 TI. The logic system of the TAD-BUS-LAN manages the trouble free copying even if several calls from a number of DS 4's needs to be copied simultaneously.

Subject to change without notice. Please note that the maximum channel capacity is only valid under standard conditions. Depending on the usage, the complexity of a specific configuration, and the number and types of software applications installed, certain restrictions may apply.
