

## **ASC to Implement Communications Recording Solution for Finnish Airports**

**ASC has been awarded a contract for equipping ten airports in Finland with communications recording facilities for their air traffic control operations.**

*Hoesbach/Germany, August 11<sup>th</sup>, 2003* – ASC telecom, a leading global provider of communications recording and quality monitoring solutions, announced today that the “Finnish Civil Aviation Administration - Ilmailulaitos” has selected ASC MARATHON TDI as the communications recording solution for their air traffic control centers in Finland.

The plan is to roll out the MARATHON solution to the nine airport locations in Finland as well as the South Finland Area Control Center over the next three years. The ASC communications recording solution will be used to record telephone and radio transmissions between the control centers and the airplanes for verification and legal compliance purposes. The recordings will give the ability to perform chronologically accurate reconstructions in the event of a serious incident.

In total, over 900 channels for digital and analog lines will be recorded. Voice and related data will be stored in a central file and database server at each location.

This new contract adds to ASC long list of Air Traffic controls and Emergency services clients, including Aeropuertos Españoles Navegación Aérea (AENA) and Airport Authority India (AAI).

### **About ASC**
